

Kalliope CTI V4

The new KalliopeCTI V4 is available in a completely redesigned format, more modern and intuitive for simplified management of your telephone services. The most significant changes concern the aspects of Unified Communications, such as the addition of customizable presence status and group chats.

KalliopeCTI V4 is a multi-platform software (available for Windows, macOS, and Linux) that allows you to access the primary corporate communication services easily.

KalliopeCTI V4 is available as a free version, or by purchasing Pro and Phone licenses (for a list of available features for each version, and to download KalliopeCTI V4 Free, visit www.kalliopepbx.com).

Among the main features of KalliopeCTI V4 are automatic actions (opening URL and custom scripts), quick access to voicemail and audio-conferencing services, the busy lamp field, management of presence status, and chat.

KalliopeCTI V4 also offers numerous telephone services, such as the ability to simultaneously manage up to 4 calls, direct and offered transfer, place on hold, call recording and call back on busy booking.

FUNCTIONALITY

Click to call

Trigger calls thanks to a convenient click-to-call service

All contacts in a single app

Consult the personal and shared address book (with the possibility to modify or add contacts)

Quick access to services

Forget system codes and access services with a simple click

Chat and presence

Share presence information and communicate with other Kalliope users

REMOTE CONTROL

KalliopeCTI V4 in the Pro version also offers, among other things, the ability to remotely control physical phones.

Thanks to technological collaborations, all Snom and Yealink desktop models are supported.

SOFTPHONE

KalliopeCTI V4 is also available in softphone mode; this license adds the SIP telephone engine to the present features.

With KalliopeCTI V4 Phone, we offer a complete solution, pre-configured and fully in line with the technological trends of the market.

Thanks to the remote control, it is possible to interact with the telephone directly from a PC.

Ultimately, with KalliopeCTI Pro, you no longer need to touch your phone!

KALLIOPE CTI MOBILE

KalliopeCTI is recently also available in a mobile version for Android and iOS devices.

All KalliopeCTI Pro and Phone licenses include a free Kalliope CTImobile license.

For more information on KalliopeCTI mobile, please consult our website or the appropriate documentation.
